

# IF THIS DOG COULD TALK!

*If your dog could talk, she would say  
"protect me."*

## ATTENTION DOG LOVERS:

### THE DOG FLU HAS BEEN INFECTING DOGS AND COULD BE A THREAT TO YOUR PUP

Unite in the effort to protect our dogs and help to stop the spread of this infectious disease:

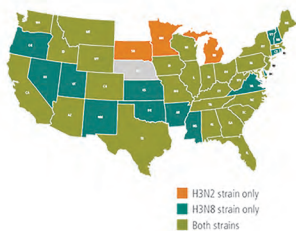

North Orange Animal Hospital is participating in National Dog Flu Awareness day, June 20th, 2018, to help pet owners better understand how to prevent the spread of canine influenza.

#### Dogs are at higher risk of contracting dog flu when visiting:

- Dog parks
- Kennels
- Pet shows/sporting events
- Boarding facilities
- Doggie day care
- Groomers

Dog flu is a highly contagious respiratory disease that spreads easily from dog to dog or is transmitted indirectly through bowls, toys, clothes, or hands of the owner. Unlike human flu, which is seasonal, canine influenza can strike all year round.

#### The growing prevalence of CIV H3N2 and H3N8\*

\*Syndromic surveillance data of Cynda Crawford, DVM, PhD, University of Florida; Edward Dubovi, PhD, Cornell University; Sarjaj Kapil, DVM, PhD, ACVIM, Oklahoma State University; Rhode Island State Veterinarian's office, and IDEXX Laboratories, February 2017.

#### Common Symptoms
